

BIRDBLOCKER CLIPS FOR SQUARE TUBE

BirdBlocker® is the professional solution to guard birds from nesting under solar panels. Our unique clip-system fits on 98% of the leading Solar Panel frames. For the Trina Vertex, we designed specific clips to mount BirdBlocker to the short edges. Because of the absence of a substantial ledge, a tailor made solution was required. The Clips securely mount around the outside, barely show on the frame and require minimal adaptation of the BirdBlocker system. The long edges remain compatible with the standard clip.

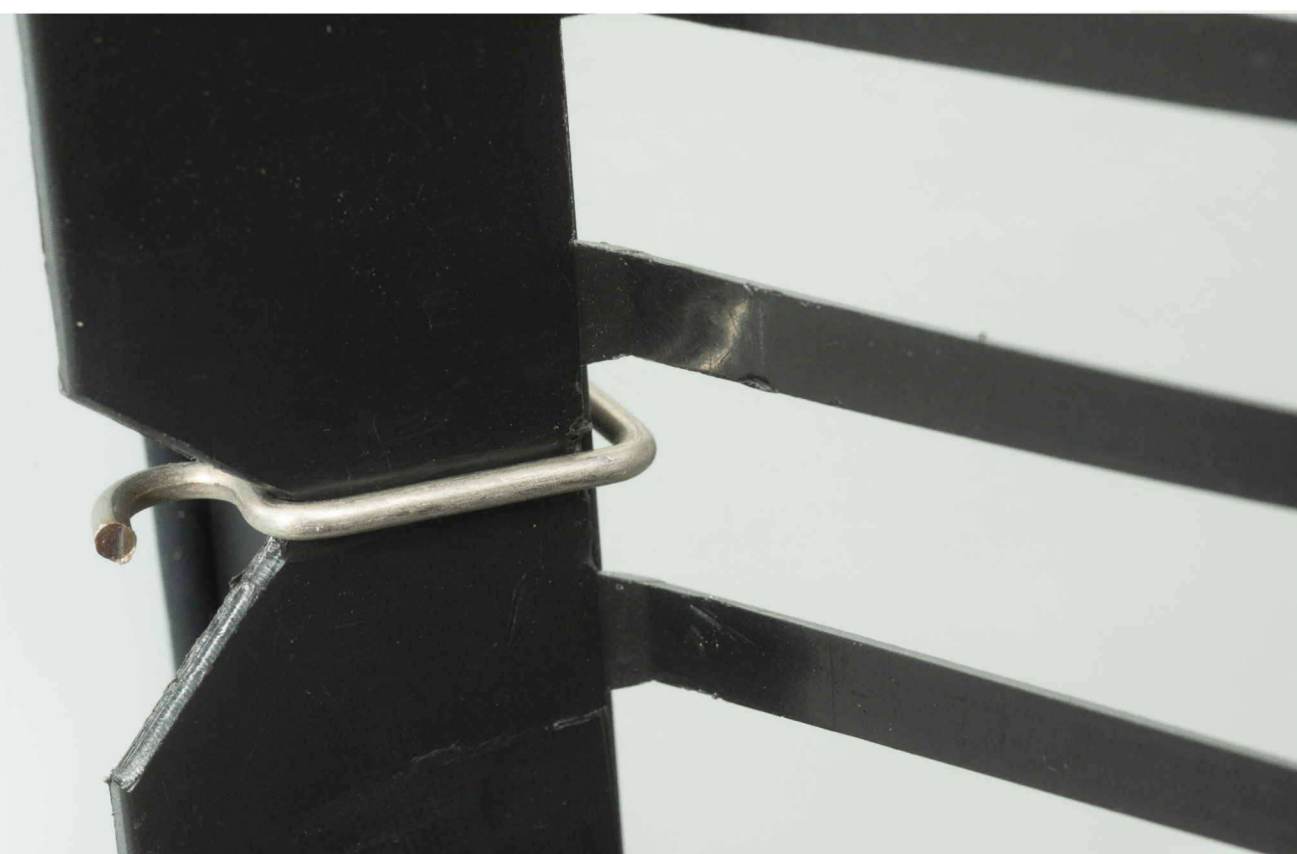

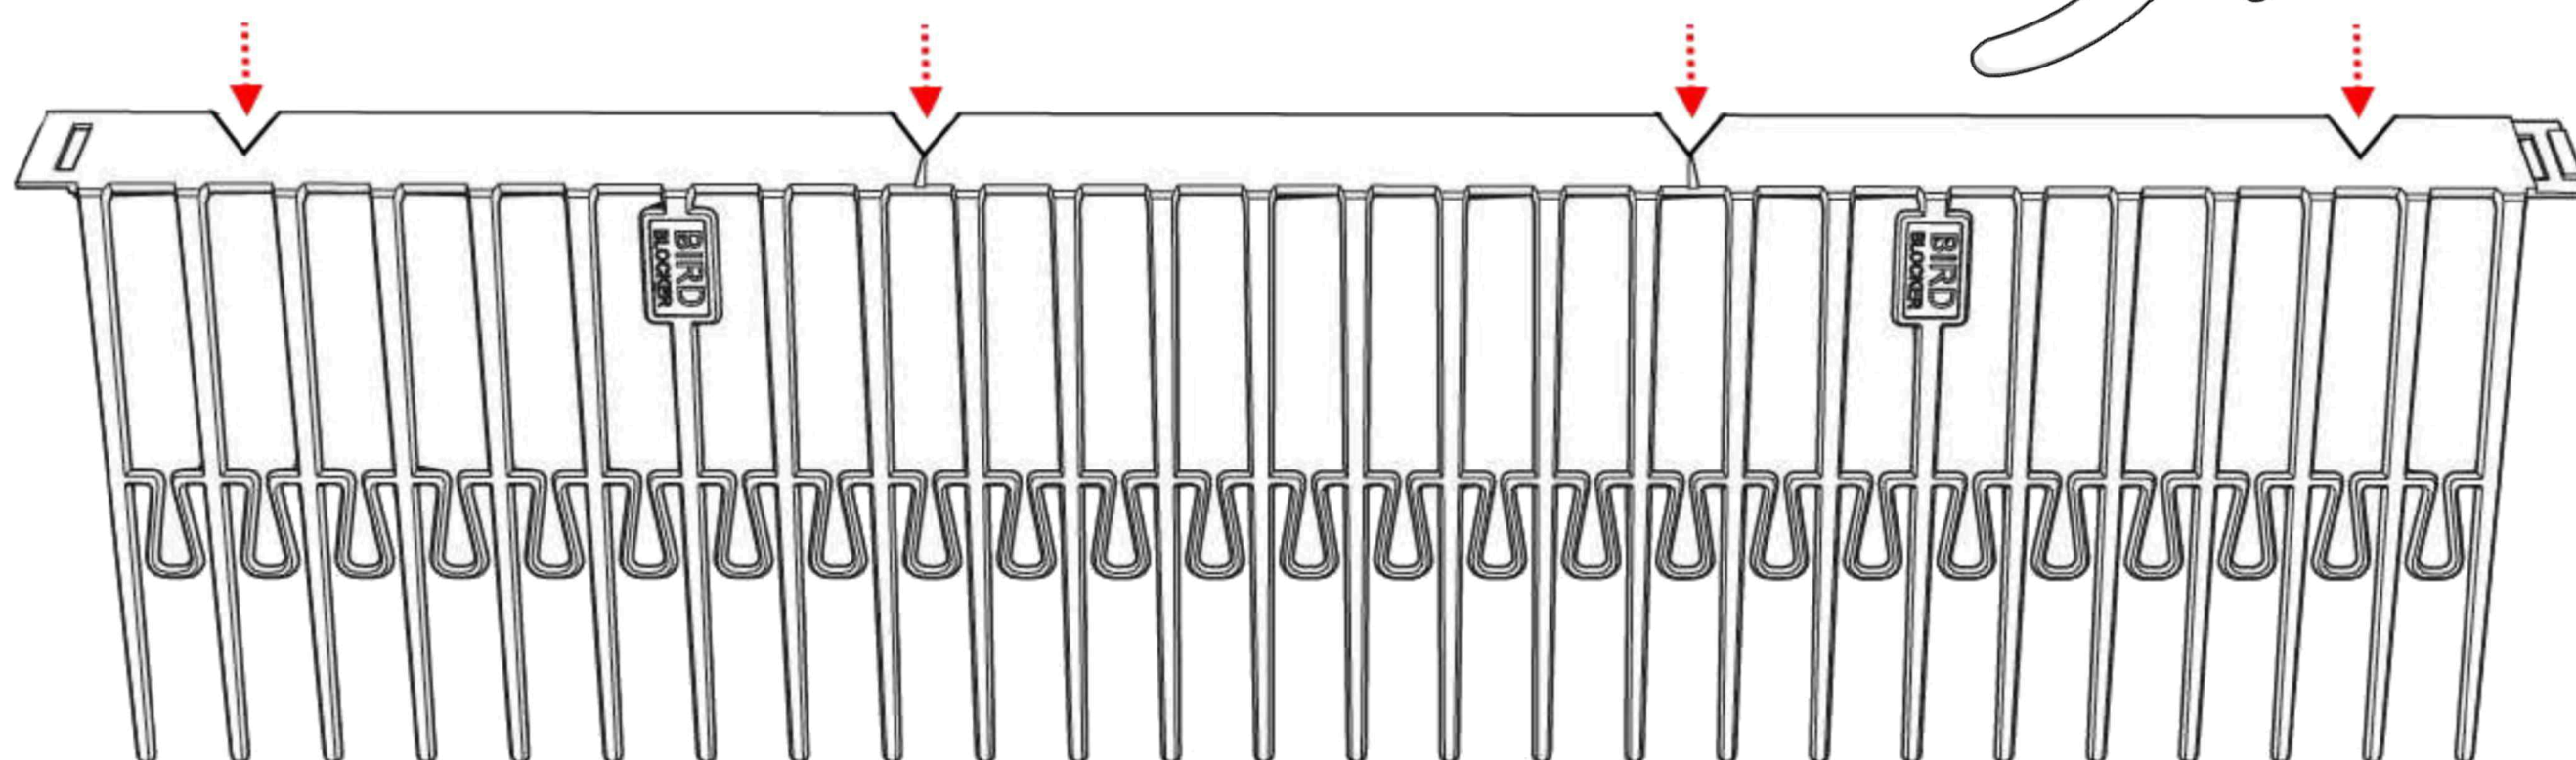

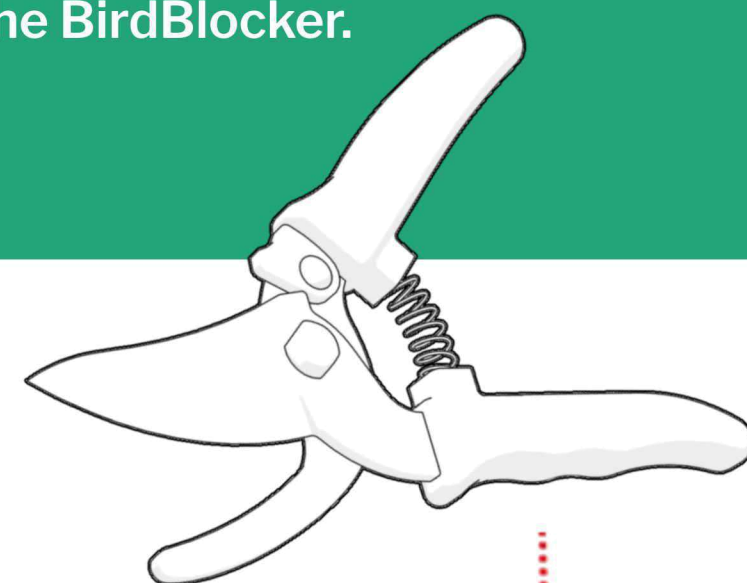

Standard clip

Square tube clip

Notes:

- BirdBlocker is dedicated to remain compatible with all leading solar panel systems. We can, however, not guarantee that new systems do not change the frame-design. Do not hesitate to contact us, if you find a specialist Clip is required.
- Due to the narrow width of the panel frame, four triangular segments need to be cut out of the backstrip of the BirdBlocker.

PRODUCT SPECIFICATIONS:

- Material: Stainless Steel
- Thickness: 2mm
- Indicative weight per unit: 2,5 gram
- Wholesale quantity: 50 units per package
- Retail quantity: 50 units per package
